## EMG 25 - EMG 20B ENERGY ANALYZER

# CONTENTS

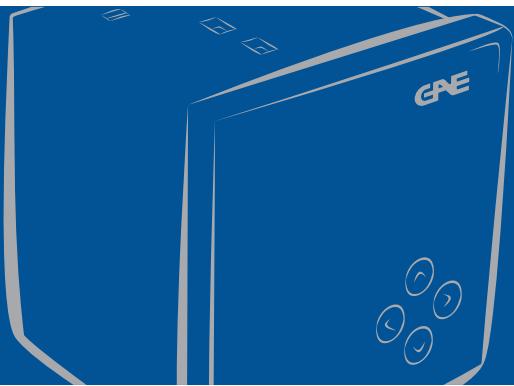

|   |           |
|---|-----------|
| <b>SECTION 1. GENERAL INFORMATION .....</b>               | <b>5</b>  |
| 1.1. Device Features.....                                 | 5         |
| 1.2. Correct Usage and Conditions for Safety.....         | 6         |
| 1.3. Panel Definitions.....                               | 7         |
| 1.4. Menu Structure .....                                 | 8         |
| 1.4.1. Key Functions .....                                | 8         |
| 1.5. Four Quadrant Representation.....                    | 11        |
| <b>SECTION 2. INSTALLATION.....</b>                       | <b>13</b> |
| 2.1. Preparing for Installation.....                      | 13        |
| 2.2. Mounting.....  | 13        |
| 2.3. Connection Diagrams .....                            | 14        |
| 2.3.1. 3P-4W and 3P-3W Connections.....                   | 14        |
| 2.3.2. Digital Output Connection Diagram .....            | 15        |
| 2.4. Dimensions EMG 25 and EMG 20B (mm) .....             | 15        |
| <b>SECTION 3. MENUS .....</b>                             | <b>17</b> |
| 3.1. Instantaneous Measurement Menus.....                 | 17        |
| 3.2. Maximum, Minimum ve Demand Menus .....               | 18        |
| 3.3. Energy Meters Menu (ENERGY) .....                    | 19        |
| 3.3.1. Assigning Predefined Value for Energy Meters ..... | 21        |
| 3.4. Counters Menu (COUNTERS).....                        | 21        |
| 3.5. Settings Menu (SETTINGS).....                        | 23        |
| 3.5.1. Basic Settings Menu (BASIC) .....                  | 27        |
| 3.5.2. Alarm Settings Menu (ALARMS) .....                 | 28        |
| 3.5.3. Alarm Relay Settings Menu (RELAYS).....            | 29        |
| 3.5.4. Demand Period Setting Menu (DEMAND).....           | 29        |
| 3.5.5. RS485 Settings Menu (RS485).....                   | 29        |
| 3.5.6. Digital Input Settings Menu (DI INPUT) .....       | 30        |
| 3.5.7. Pulse Output Settings Menu (PULSE).....            | 31        |
| 3.5.8. Password Settings Menu (SECURITY) .....            | 31        |
| 3.5.9. Display Setup (DISPLAY) .....                      | 31        |
| 3.5.10. Clear Menu (CLEAR) .....                          | 32        |
| 3.6. Save, Changing Value and Approval Prosedure .....    | 33        |
| 3.6.1. Changing Value/Setting .....                       | 33        |
| 3.6.2. Save Prosedure .....                               | 34        |
| 3.6.3. Approval Procedure.....                            | 35        |
| <b>SECTION 4. RS485 COMMUNICATION.....</b>                | <b>37</b> |
| 4.1. Readable and Writable Data .....                     | 37        |
| 4.1.1. Status/Alarm Flags.....                            | 47        |
| 4.2. Multiple Choice Settings via Modbus .....            | 49        |
| <b>SECTION 5. FACTORY DEFAULT SETTINGS.....</b>           | <b>51</b> |
| <b>SECTION 6. TECHNICAL SPECIFICATIONS.....</b>           | <b>55</b> |

## **EMG 25 and EMG 20B**

ENERGY ANALYZER

### **1. GENERAL INFORMATION**

## SECTION 1. GENERAL INFORMATION

### 1.1. Device Features

EMG is designed to measure;

- Phase-neutral voltages,
- Phase-phase voltages,
- Phase current,
- Neutral current,
- Frequency
- CosØ,
- Power factors,
- Active powers,
- Reactive powers,
- Apperant powers,
- THDV,
- THDI,
- 1-31 current and voltage harmonics,

Besides, EMG has numerous features such as;

- Phase loss information and sequence error display
- Determining and saving in the memory of maximum and minimum values of current, voltage, frequency, cosØ, power factor, THDV, THDI, active, reactive and apparent.
- Measuring current, active power, reactive power and apparent power values and saving in the memory
- Setting alarm for current, voltage ,frequency and power factor parameters.
- 2 tariff meters. These meters record Import Active, Export Active, Import Reactive, Export Reactive.
- Storing on hour counter (on hour), run hour counter (total energized time) and power interruption counter
- RS485 communication via MODBUS RTU protocol
- Digital inputs in order to start counter, 2nd tariff or run hour counter.
- Digital outputs which can be set to energy meters or counters as output parameters.
- 2 alarm relay outputs
- Avoiding unauthorized control by a 4-digit-password.

**Table 1.1.** Product Features

|   | EMG 25    | EMG 20B |
|---|-----------|---------|
| Type of device enclosure                                      | Panel     | Panel   |
| Basic measurements (V,VLL, I, IN, F, Cos φ, PF, P, Q, S, THD) | ●         | ●       |
| 1-31 Harmonics  | ●         | ●       |
| Max-Min Value   | ●         | ●       |
| Demand Values (I, P, Q, S)                                    | ●         | ●       |
| On hour, Run Hour, Int  | ●         | ●       |
| Energy Meters   | 2 tariffs | -       |
| Assigning alarm to the parameters                             | ●         | -       |
| Alarm Relay   | 2 Qty     | -       |
| RS485   | ●         | ●       |
| Digital Input   | 2 Qty     | -       |
| Digital Output  | 2 Qty     | -       |
| Indicators and leds   | ●         | ●       |
| Order no  | 606170    | 606171  |

Please check the table above.

The product you have may not have all the features described in the User Guide.

## 1.2. Correct Usage and Conditions For Safety

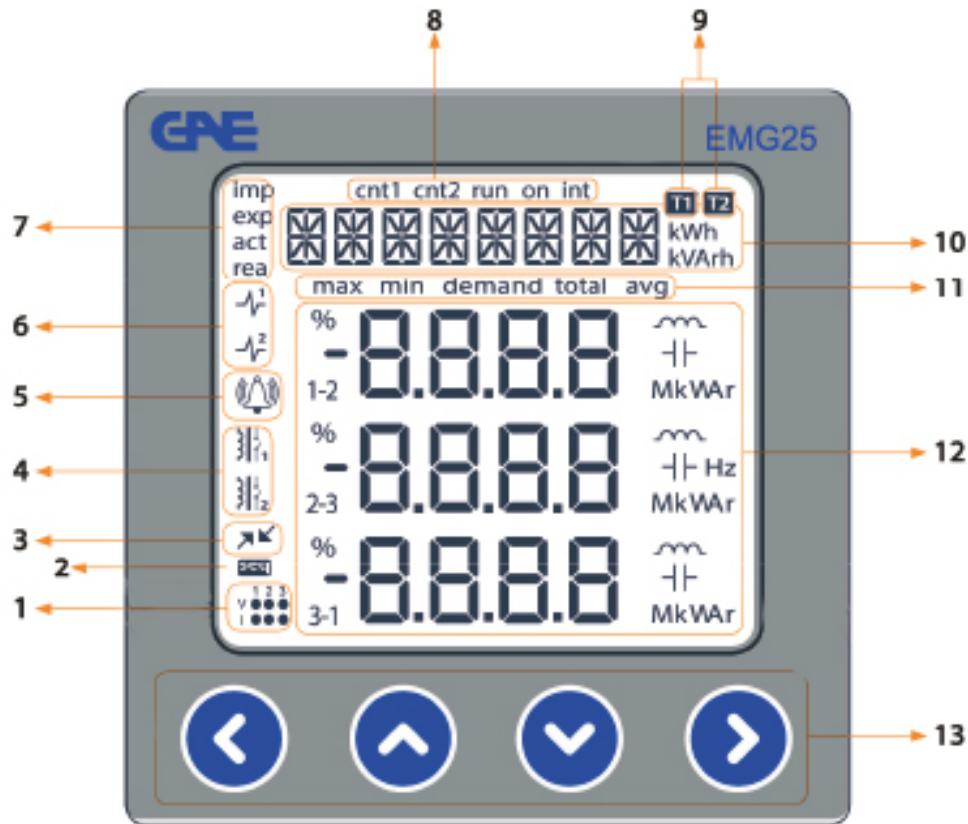

- Installation and wiring must be performed by authorized technicians in accordance with the instructions in the user manual. Do not commission the device before proper wiring.
- Make sure the device is de-energized before connecting to the mains.
- Short circuit the k-l terminals of the current transformer in another location before disconnecting the current transformers. Failing to do so will cause dangerous high voltages in the secondary terminals of the current transformers.
- Use a dry cloth to clean the device. Do not use alcohol, thinner or any abrasive materials.
- Make sure all wiring is properly made before commissioning the device.
- Do not open the device. There are no serviceable parts by the user.
- Keep the device away from humidity, water, vibrations and dust.
- It is advisable to connect a circuit breaker or an automatic fuse between the currentinput of the device and the mains (2 amps).

The manufacturer does not assume any responsibility for any undesired consequences if the above measures are not adhered to.

## 1.3. Panel Definitions

### Front Panel

**Figure 1.1.** EMG 25 Front Panel

- |                                 |  |
|---------------------------------|--|
| 1 Current and Voltage situation | : Indicate phase loss of currents and voltages.                              |
| 2 Sequence error icon           | : Indicate sequence error of voltages.                                       |
| 3 Communication active icon     | : Indicate that RS485 communication is made.                                 |
| 4 Relay icons                   | : Indicate that relays are activated.  |
| 5 Alarm icon                    | : Indicate that there is alarm on the system.                                |
| 6 Pulse output icons            | : Indicate that pulse outputs are activated.                                 |
| 7 Energy counter icons          | : Indicate the type of the counter on the menu bar.                          |
| 8 Counter icon                  | : Indicate the type of the counter on the menu bar.                          |
| 9 Tariff icons                  | : Indicate that the counter of which tariff on the menu bar.                 |
| 10 Menu bar and counter units   | : Indicate menu names, energy counter and counters and settings.             |
| 11 Submenu icons                | : Show that values of which submenu on the indicators.                       |
| 12 Indicators and units         | : Indicate measurements, maximum, minimum and demand values and their units. |
| 13 Keys                         | : Use this key to switch between the menus and change the numerical values.  |

### Back Panel

- |                        |                              |
|------------------------|------------------------------|
| I1-k1, I2-k2, I3-k3    | : Current measurement inputs |
| V1, V2, V3, N          | : Voltage measurement inputs |
| D+, GND1, D-           | : RS 485                     |
| DI1, GND, DI2, GND     | : Digital Inputs             |
| DO1+, DO1-, DO2+, DO2- | : Digital Outputs            |
| out1, out2             | : Alarm relay outputs        |
| Un                     | : Power supply               |

## 1.4. Menu Structure

The menus are shown instantaneous measurements menu and their maximum, minimum, demand, average and total value at the tables below. The menu pages change with up, down, right and left direction buttons.

### 1.4.1. Key Functions

All features can be change depend on the model.

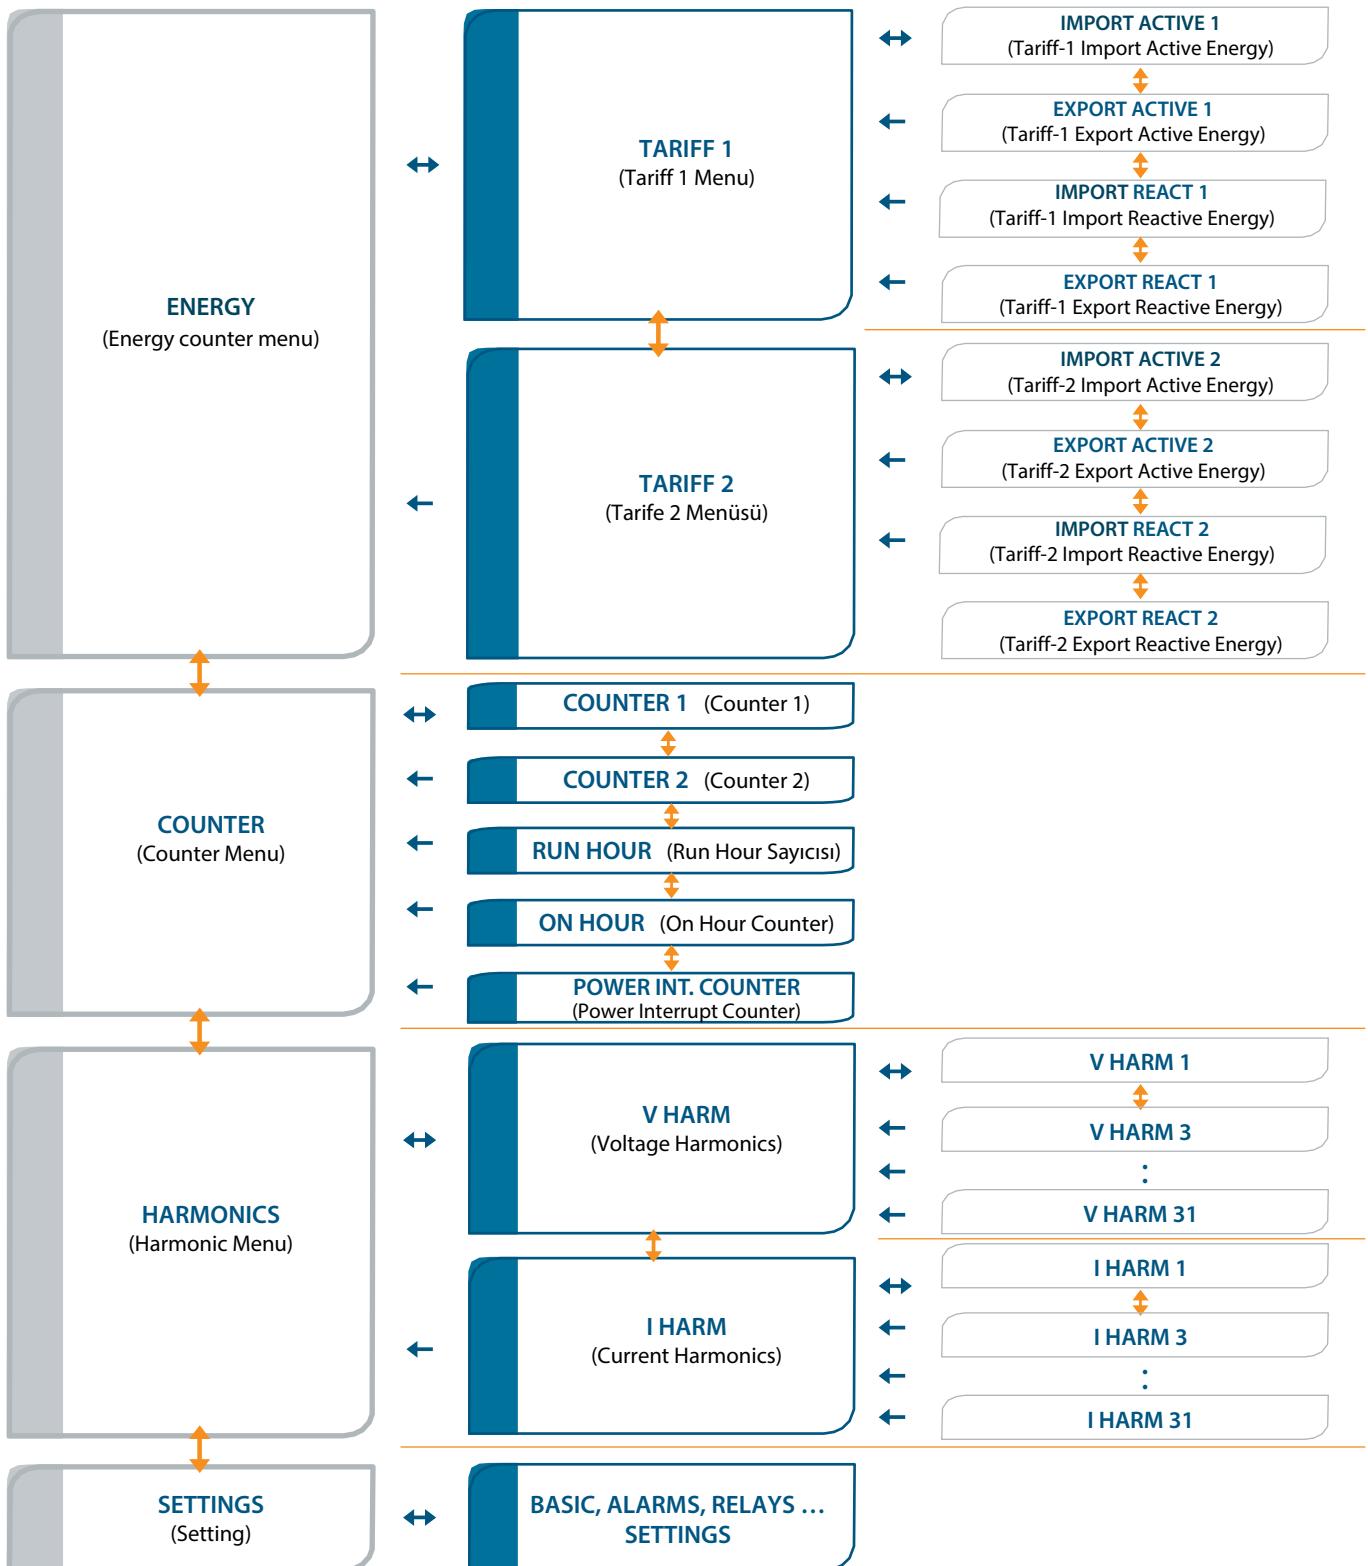

The buttons placed front panel and their functions are explained at the table below.

**Table 1.2.** Key Functions

| At the Measurements Menus |                           | At the ENERGY, COUNTERS, HARMONICS, SETTINGS Menus |                            | Initialize the Counters                      |  | To change the settings                                  |  |                          |
|---------------------------|---------------------------|--|----------------------------|--|--|---|--|--------------------------|
|                           | Short Pressing (t < 2sec) | Long Pressing (t > 2sec)                           | Short Pressing (t < 2sec)  | Long Pressing (t > 2sec)                     | Long Pressing (t < 2sec)                             | Long Pressing (t > 2sec)                                | Short Pressing (t < 2sec)                            | Long Pressing (t > 2sec) |
| RIGHT BUTTON              | Switching between menu    | Skips to "ENERGY" menu                             | Pass to the one sub-menu   | Skips to bottom menu                         | Changes the active step                              | Activates the value changing or Changes the active step | N/A  |                          |
| DOWN BUTTON               | Switching between menu    | N/A  | Changes the menu page      | N/A  | Changes the value                                    | N/A   | Changes the value                                    | N/A                      |
| UP BUTTON                 | Switching between menu    | N/A  | Changes the menu page      | N/A  | Changes the value                                    | N/A   | Changes the value                                    | N/A                      |
| LEFT BUTTON               | Switching between menu    | Skips to Starting Page                             | Pass to the one upper-menu | Skip to the last menu from measurements menu | Stops changing value and confirms the entering value | N/A   | Stops changing value and confirms the entering value | N/A                      |

| <THD I>                            | THDI                            | Max THDI    | Min. THDI    |                |                |                        |                       |                 |

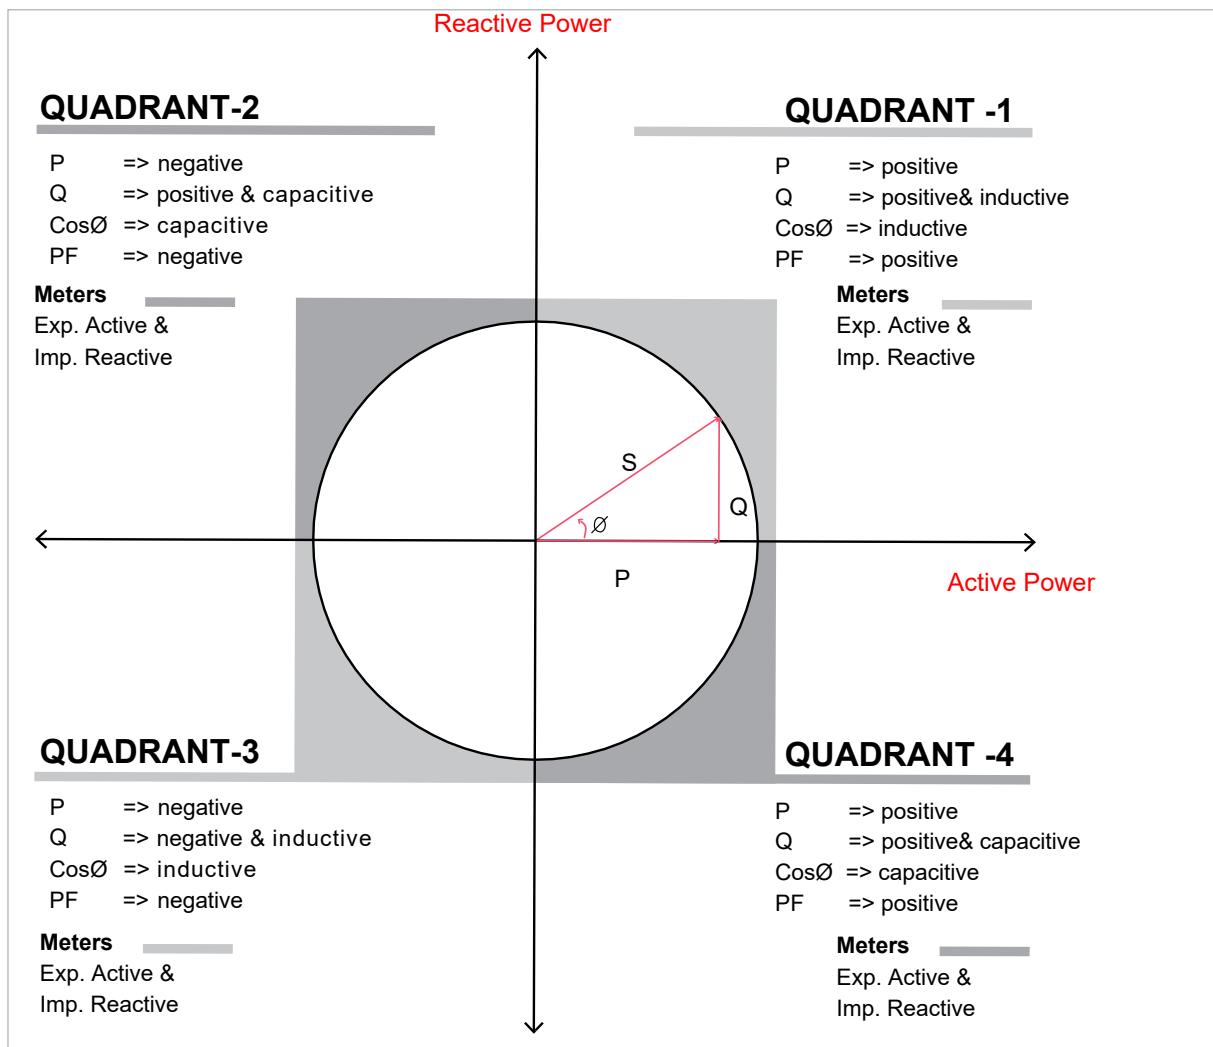

**Table 1.4.** Menu Switch-2 (Energy, Counters, Harmonics and Setting Sub-menus)

Energy counters, counters, odd harmonics up to 31st and settings menus are placed at the table above. Menu switching are made via up, down, right and left direction buttons as stated at the table.

**NOTE:** The right button shall be pressed long in order to switch from Table 1-3 to Table 1-4, and vice versa.

## 1.5. Four Quadrant Representation

The angle( $\emptyset$ ) between voltage and current provides us information about the direction of energy flow. A positive sign for active/reactive power indicates that active/reactive power is consumed. And also a negative sign for active/reactive power indicates that active/reactive power is generated.

**Figure 1.2.** Four Quadrant Representation

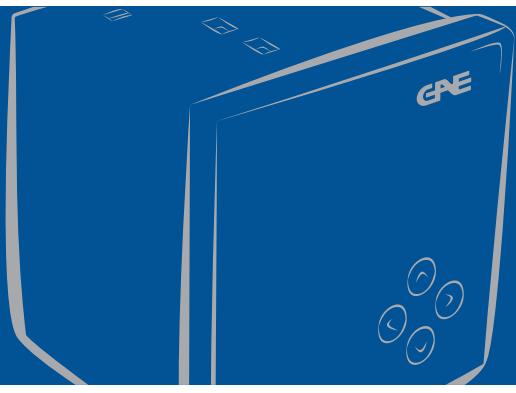

**NOTE:** If the signs of active and reactive power are examined, it can be defined the quadrant that EMG 25 and EMG 20B measures.

If active power display is seem constantly, it means active power(P) is positive. If it is blinked, it means active power(P) is negative.

If reactive power(Q) display is seem constantly, it means reactive power(Q) is positive. If it is blinked, it means reactive power(Q) is negative.

**NOTE:** Signs of P and Q can be reached through modbus communication.

- e.g.;       $P= +10\text{kWh}, Q= +5\text{kVAr}$    =>   Quadrant-1  
 $P= -10\text{kWh}, Q= +5\text{VAr}$    =>   Quadrant-2  
 $P= -10\text{kWh}, Q= -5\text{kWh}$    =>   Quadrant-3  
 $P= +10\text{kWh}, Q= -5\text{kWh}$    =>   Quadrant-4

## **EMG 25 and EMG 20B**

ENERGY ANALYZER

### **2. INSTALLATION**

## SECTION 2. INSTALLATION

### 2.1. Preparing for Installation

Assembly and related connections of the product, must be implemented by authorized persons in accordance with the instructions of user manual.

The device must not be put into service if the operator is not sure that all connections are correctly accomplished.

### 2.2. Mounting

EMG 25 and EMG 20B is placed vertically into the gap located in the panel. After the product is placed into the panel, fixing brackets should be installed on the product. After that it should be fixed to the panel wall with the screws.

Before wiring up voltage and current ends to EMG 25 and EMG 20B, you must be sure that the power is cut.

The product is connected to current transformer(s). Before disconnecting current transformer leads, be sure that they are short circuited elsewhere or connected to a parallel load which has sufficiently low impedance. Otherwise dangerously high voltages will be induced at the current transformer leads. Same phenomena also apply for putting into service.

## 2.3. Connection Diagrams

### 2.3.1. 3P-4W and 3p-3W Connections

There are two ways for connections of voltage and current. With neutral (3P-4W), without neutral (3P-3W).

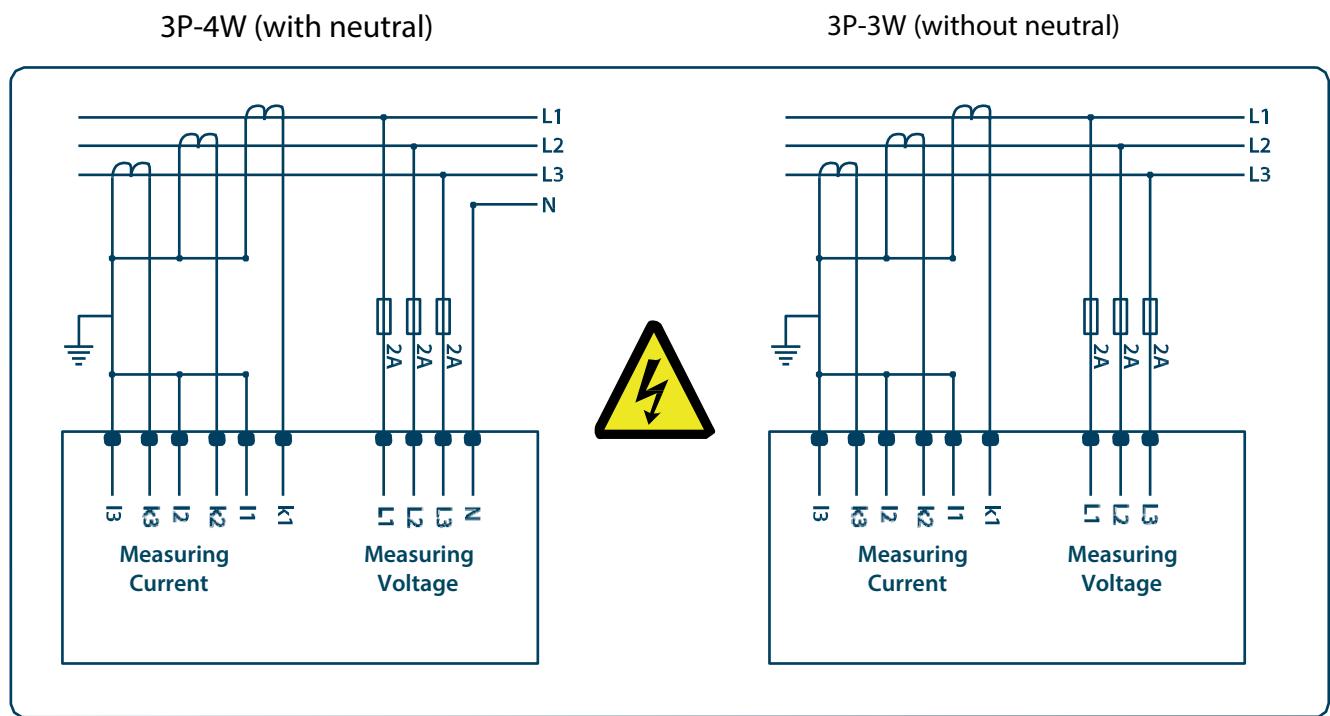

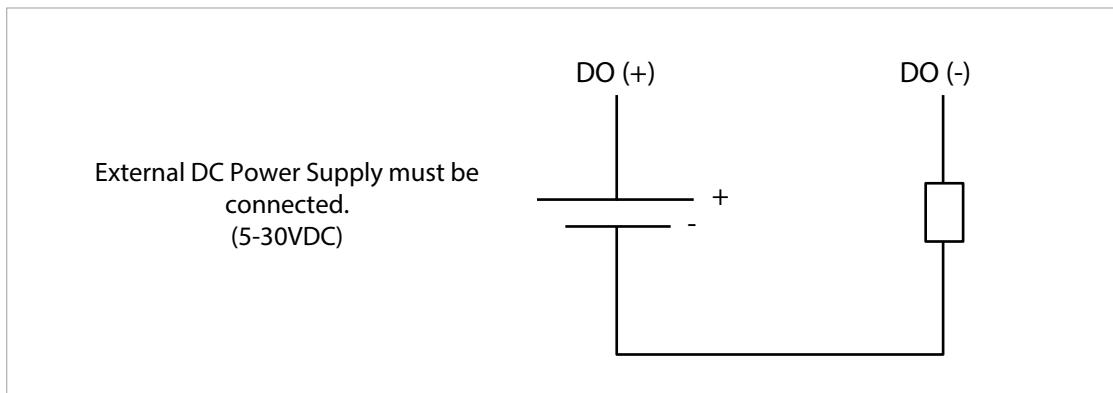

Figure 2.1. Connection Diagram

**Figure 1.1.** 1<sup>st</sup> item, displays current and voltage phase position are On/Off. If a current or voltage phase seems incomplete and should be checked by the relevant links / connections reached the device.

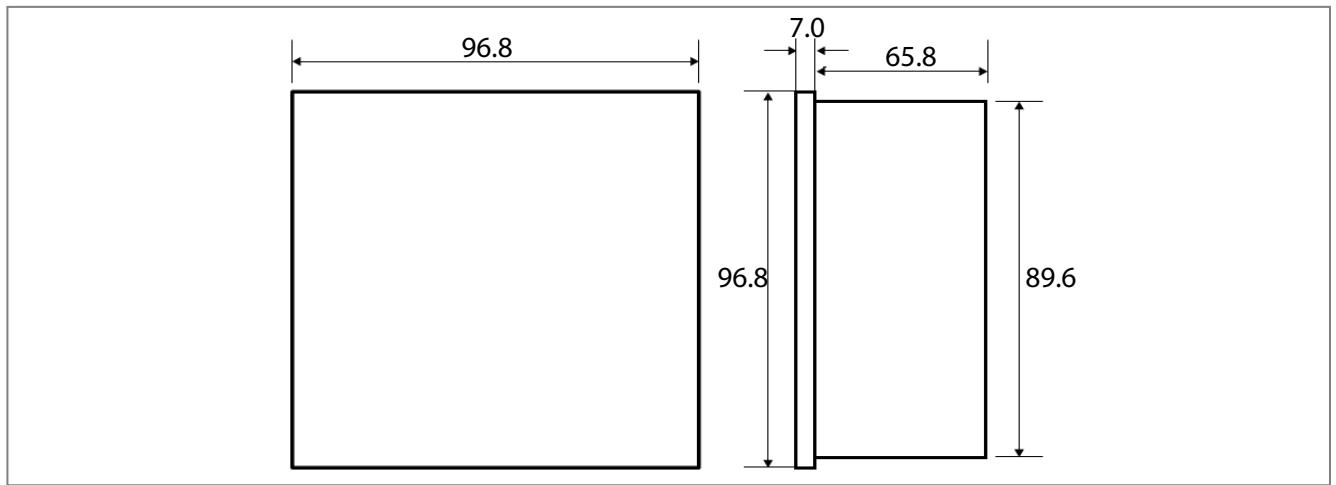

**Figure 1.1.** 2<sup>nd</sup> item, if there is an error in the voltage phase during due to incorrect sequence; "Voltage phase sequence error icon" will appear. If this icon appears; phase-sequence voltage should be checked.

### 2.3.2. Digital Output Connection Diagram

ENERGY ANALYZER

### **3. MENUS**

## SECTION 3. MENUS

### 3.1. Instantaneous Measurement Menus

Voltage (L-N and L-L), current, neutral current,  $\cos\theta$ , power factor, active power, reactive power, apparent power, THDV and THDI values are shown in instantaneous menu.

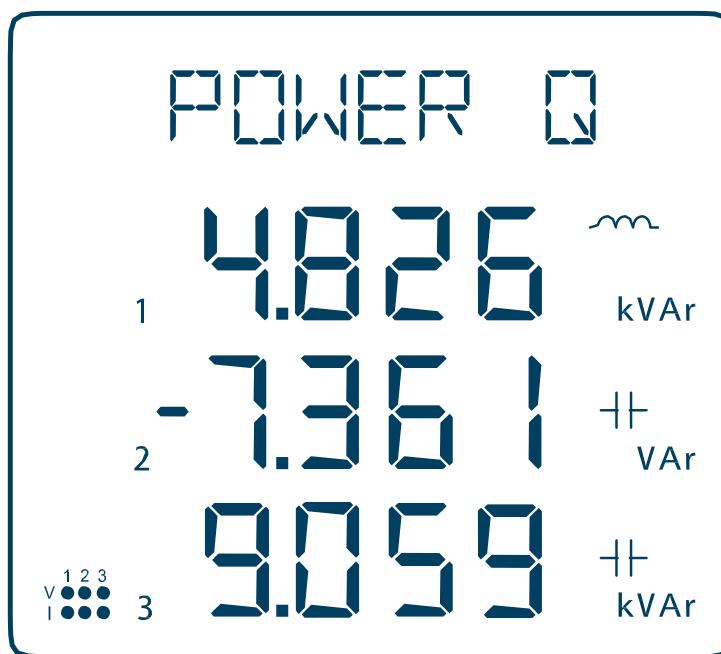

Menu are given the name of which is shown in Menu bar.

The values shown on the display is expressed in what phase or phases at the lower left corner of the display numbers.

Phase Numbers are not displayed at Menus which display average, total and other properties of network. In this case phases are displayed in 2. Level.

Next to each index value unit of respective rows are indicated. It also states that inductive or capacitive phases are indicated next to the relevant indicators.

Table 3.1. for parameters displayed in the menus.

**Figure 3.1.** Instantaneous Measurement Menus (Reactive Power)

When the product is mounted on a panel which consumes power, active power (P) must be positive. If active power is negative, operator should cross connect k-l leads of the current transformer.

When the product is mounted on a panel which generates power, active power (P) must be negative. If active power is positive, operator should cross connect k-l leads of the current transformer.

### 3.2. Maximum, Minimum ve Demand Menus

Minimum and maximum values are calculated and stored in the non-volatile memory for below parameters.

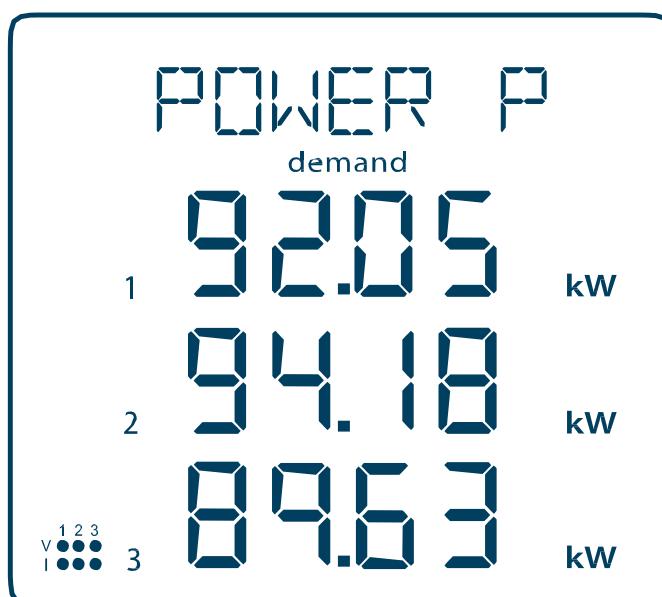

- Voltage (phase-neutral, phase-phase)
- Neutral current
- Frequency
- CosØ
- Power factor
- THDV
- THDI

Besides maximum and minimum values, demand values are calculated and stored in the non-volatile memory for below parameters.

- Current
- Active power
- Reactive power
- Apparent power

Table 3.1. shows the menu movements.

**NOTE:** The values held in memory can be deleted by selecting "CLEAR" menu in the "SETTINGS" menu. Reset and return to the factory settings can be made with RS 485 communication.

**Figure 3.2.** Instantaneous Measurement Menus (Active Power)

### 3.3. Energy Meters Menu (ENERGY)

These tariffs are shown in "Enr" menu. Each tariff has import active, export active, import reactive and export reactive meters.

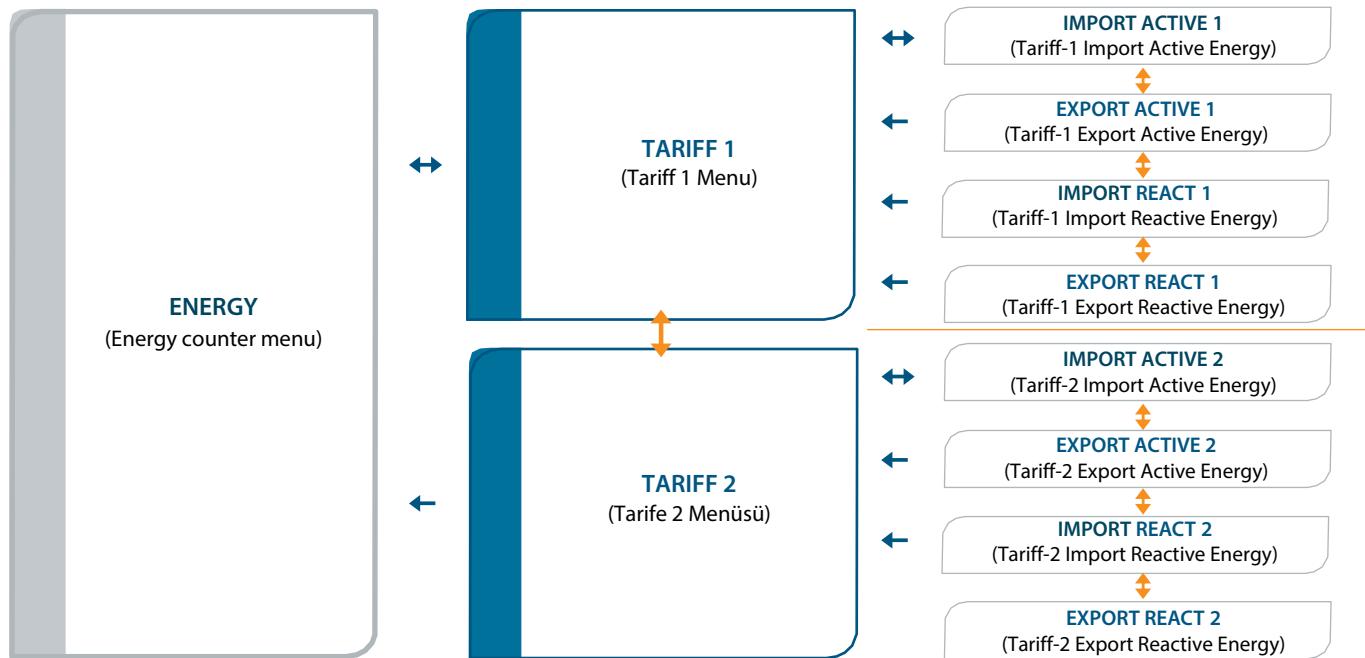

- Import Active Energy Meter (I.Ac)
- Export Active Energy Meter (E.Ac)
- Import Reactive Energy Meter (I.rE)
- Export Reactive Energy Meter (E.rE)

The menu structure is shown below:

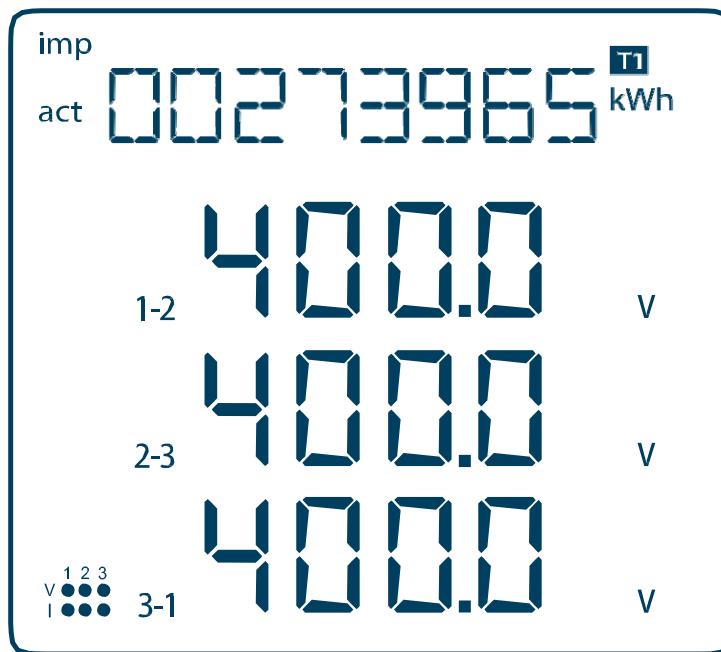

All features can be change depend on the model.

**Table 3.1.** Energy Meters Menu

The following menu icons are active in "ENERGY" menu:

- T1** : This icon appears with Tariff 1 counters
- T2** : This icon appears with Tariff 2 counters
- imp** : This icon appears with import energy counters
- exp** : This icon appears with export energy counters
- act** : This icon appears with active energy counters
- rea** : This icon appears with reactive energy counters

**Figure 3.3.** Tariff 1 Import Active Energy Menu

Counters are displayed in the format xx xxx xxx kWh / kVArh (See Fig. 3.3). All counters are reset at 99 999 999 kWh / kVArh and then start over from zero. It is possible to initialize the counters under the "ENERGY" menu.

To activate 2.tarif counters, firstly digital counter input type should be selected as 2.tarif ("tr2") and it must take an active position of the digital input. DI digital input becomes active when GND- ends are shorted. Otherwise 1.tarif is active.

**Figure 3.4.** Tariff 2 Export Reactive Energy Menu

### 3.3.1. Assigning Predefined Value for Energy Meters

In any meter menu, press and hold the right key for at least 2 seconds and the respective menu title starts blinking. Using the right arrow key, move to the digit you want to change and enter the value using the up/down arrows. When you are done entering the value, confirm using the left arrow key. Move on to the storage procedure to store the changes you made. (See 3.6. Save Procedure)

If password protection is enabled, press and hold the right key for at least 2 sec to display the password authentication page. Enter the password to proceed to the counter assignment.

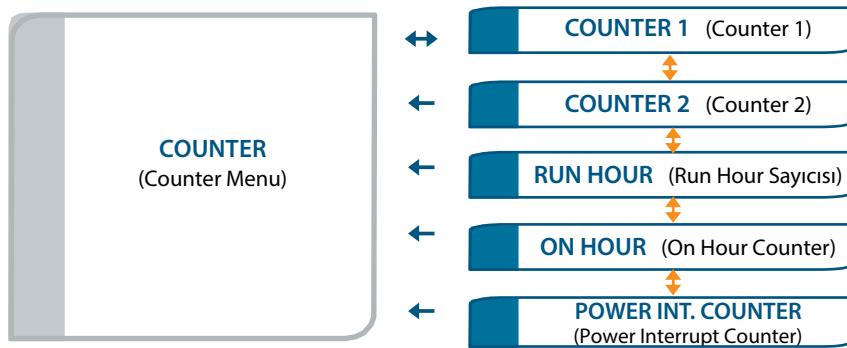

## 3.4. Counters Menu (COUNTERS)

There are counters under the “COUNTERS” menu below.

- “COUNTER1”: When a digital input 1 is assigned to a counter, it counts the changes in the digital input. The value is displayed in “COUNTER1” menu.
- “COUNTER2”: When a digital input 2 is assigned to a counter, it counts the changes in the digital input. The value is displayed in “COUNTER2” menu.
- “ON HOUR” Counts and displays the total “on” time for the device in hours.
- “RUN HOUR”: If the digital input type was set to “run hour enable”, it counts the time elapsed during the digital input is in active position. This counter requires signal from 3-phase voltage and 3-phase current inputs to function without connecting to a digital input. The measured value is displayed in hours
- “POWER INTERRUPTION COUNTER”: Counts the power interruptions for the device.

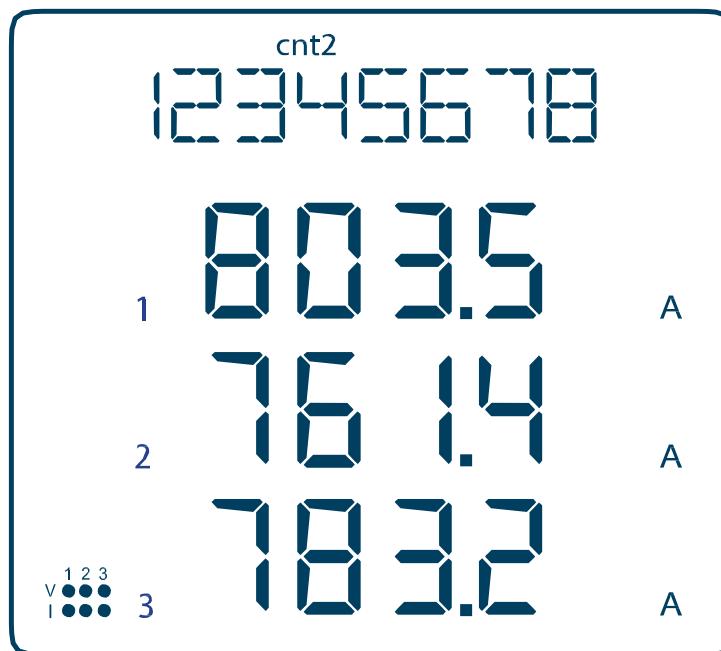

The menu structure is shown below:

**Table 3.2.** Counters Menu Structure

Counters showing the following icons on the "COUNTERS"menu is active:

- cnt1** : This icon appears with "COUNTER1" counter.
- cnt2** : This icon appears with "COUNTER2" counter.
- run** : This icon appears with "RUN HOUR" counter.
- on** : This icon appears with "ON HOUR" counter.
- int** : This icon appears with "POWER INTERRUPTION COUNTER" counter.

**Figure 3.5.** COUNTER2 Menu

Counters are displayed as 8 digits. All counters are reset at 999 999.99 and then start over from zero.

Only "COUNTER1", "COUNTER2" and "RUN HOUR" counters can be assigned values or reset. Use the procedure for assigning default values to assign values to counters. (See 3.6 Save Procedure)

When the energy meters are displayed instantaneously, last measured parameters (such as voltage, current, active power values etc.) are continued to display under the energy meter value as well.

### 3.5. Settings Menu (SETTINGS)

EMG 25 and EMG 20B settings are made in the SETTINGS menu. Table 3-3 shows the SETTINGS menu tree.

All features can be change depend on the model.

**Table 3.3. SETTINGS Menu**

| Menu     | Sub Menu 1 | Sub Menu 2 | Sub Menu 3 | Sub Menu 4 | Description                                    |

### 3.5.1. Basic Settings Menu (BASIC)

This is the menu item where you make the current transformer ratio, voltage transformer ratio and connection type settings. Please see Table 3.3. for the menu tree and Section 5 for the factory default settings.

**Current transformer ratio (Ctr):** The calculated currents are multiplied by the current transformer ratio (Ctr) to be indicated on the displays and the modbus addresses.

**Voltage transformer ratio (Utr):** The calculated voltages are multiplied by the voltage transformer ratio (Utr) to be indicated on the displays and the modbus addresses.

**Connection (Conn):** This menu is for the network connection settings.

If "3P4W" (3-phase, 4-wire connection type) was specified for the network connection setup, the initial menu is "Voltage (Phase-Neutral)". This menu is displayed first when the device is energized.

If "3P3W" (3-phase, 3-wire connection type) was specified for the network connection setup, the initial menu is "Voltage (Phase-Phase)". This menu is displayed first when the device is energized.

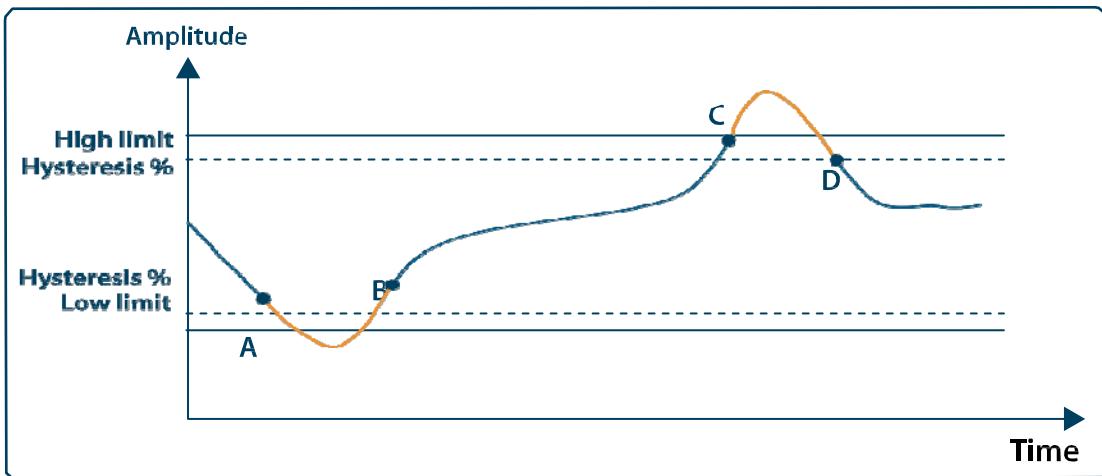

### 3.5.2. Alarm Settings Menu (ALARMS)

Use this menu item to set the alarm limits, hysteresis value and alarm delay time. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

Outside the alarm limits:

- The values which are belong to adjusted alarm parameter, start flashing.
- When alarm delay time is expired, ( ) symbol is displayed in main screen.
- If relay outputs are assigned to any alarm and also if there is an alarm in the system, related relay symbols ( ) are displayed in the main screen after alarm delay time.

**Figure 3.6.** Alarm Example

(Alarm delay was set to zero)

- A low limit alarm occurs at point A.
- Alarm disappears at point B.
- A high limit alarm occurs at point C.
- Alarm disappears at point D.

### 3.5.3. Alarm Relay Settings Menu (RELAYS)

Use this menu item to set the conditions of the alarm relays. You can set both alarm relays to the following positions:

- OFF : Relay does not energize in an alarm condition.
- LO : Relay energizes when a low limit alarm occurs.
- HI : Relay energizes when a high limit alarm occurs.

Related relay is de-energized when the alarm condition ends. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

### 3.5.4. Demand Period Setting Menu (DEMAND)

Use this menu item to setup the demand period. At the end of the specified period, demand values are calculated in a periodic cycle.

Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

### 3.5.5. RS485 Settings Menu (RS485)

Use this menu item to set the baudrate, slave ID and parity control settings in RS485 communication. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

**Baudrate (bAud):** Communication Signal speed is expressed with "baud" in terms of units. The baud rate can be changed in the adjustment range.

**Slave ID (Id):** RS485 communication is working on the basis of one or more slave devices communicate with one master. EMG 25 and EMG 20B, as a slave in the RS485 communication responds to queries made by the master. If the device is slave match in this communication are set in the slave ID Menu.

**Parity Check (PrtY):** It is a control mechanism for data accuracy. It counts odds "1" in Binary data. There are "odd"and 'even" parity control method.

For communication, master and slave devices must be using the same method.

The desired method is selected from the menu or " NONE" option selected to make parity check feature turned off.

### 3.5.6. Digital Input Settings Menu (DI INPUT)

Use this menu item to set the on/off position, type, delay time and detection edge for the digital input. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

Digital input is based on dry contact detection principle. Never apply signal to inputs. Otherwise there is risk of damaging the device.

#### Digital input type (tYPE):

- **Option to enable tariff 2 (TARIFF 2):** If you choose this option for the digital input type, tariff2 energy counters will be enabled when the digital input is active (dry contact must be applied from related DIN+ and DIN-).
- **Option to enable the counter (COUNTER):** If you choose this option for the digital input type, the counter will count the changes in the position of the digital input depending on the chosen detection edge.
  - If you choose rising edge detection (RISING) for the detection edge, the counter will increase by 1 on each activation of the dry contact that is connected to the digital input.
  - If you choose falling edge detection (FALLING) for the detection edge, the counter will increase by 1 on each de-activation of the dry contact that is connected to the digital input.
  - If you choose both edges detection (BOTH EDGE) for the detection edge, the counter will increase by 1 on each activation and de-activation of the dry contact that is connected to the digital input.
- **Run Hour enable option (RUN HOUR):** If you choose this option for the digital input type, the "run hour counter" start counting when the digital input is active.(Dry contact must be applied from related DIN+ and DIN-).

#### Detection delay time (dLY):

The input is enabled or disabled based on the detection delay time which is set to account for contact spikes or noise in the digital input.

#### Detection edge (EdgE):

Use this menu item to choose the position where the digital input is detected active or passive. This menu is available only for the digital input mode "counter". Other options always use the rising edge detection.

### 3.5.7. Pulse Output Settings Menu (PULSE)

Use this menu item to specify the on/off position, output parameter, pulse duration and step range settings for the pulse outputs. You can freely choose the settings for each pulse output independent of each other. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

The pulse output is activated with an increase in the predefined output parameter that is equal to each step range and deactivates after the predefined time.

#### **Output parameter setup (OUT):**

Use this menu item to set the parameter dependency of the output. The respective output is closed when you choose "OFF".

#### **Pulse duration setup (durA):**

Use this menu item to specify the time the pulse is active.

#### **Pulse step range (rAt):**

Use this menu to specify the smallest possible increase for the input parameter that will output a pulse.

### 3.5.8. Password Settings Menu (SECURITY)

Use this menu item to turn the password protection on/off, set a password activation time and change password settings editing options. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

4 digit password protects the product setup and counter menus against unauthorized access and modifications. When activated, a password query screen is displayed if someone attempts to change the values. After a successful login, the device will not ask for a password until the "password activation time" has elapsed. You can set this value in the respective menu item. Please see [Table 3.3.](#) for the menu tree and [Section 5](#) for the factory default settings.

If you do not press any keys after entering the password or do not change the settings via MODBUS, password protection is re-enabled after the password activation time has elapsed.

### 3.5.9. Display Setup (DISPLAY)

The settings about menu screen and backlight are made in this menu.

#### **Menu Setup (MENU):**

Menu scroll setting, display time and start page are made in this sub-menu.

- **Menu scroll setup (ScrL):** Menu Navigation is given as a name to command which is moving menu screen to next one at the end of display time. If "ON" is selected, Menu navigation is activated after device start or 15 seconds after the last key is pressed.

● **Menu display period (Scr.P):** Each menu appears in the screen during the period that is adjusted in "menu display time". The unit is second and it is effective when menu scroll mode is "on". It is ineffective when menu scroll mode is "off".

● **Home page setup (Strt):** When the device is first energized, first screen menu is called Menu opening page. Any of this menu can be set from available instantaneous measurements Menu as Home page. Pre value "VOLTAGELN" menu is designated as Home page.

### Display Backlight Setup (BACKLGHt)

Is subhead which lets adjustment of display backlight options and duration of backlight.

● **Display backlight options (oPt):** This menu is adjustment of display backlight activation depending on the time (TIME DEP), always on (CONT ON) or permanently closed (CONT OFF)

Time Dependent (TIME DEP): Backlight is turned on with device operates or with a pressing any key. Display backlight will be turned off if there is no pressing any key after set time. It is preferred to have longer-lasting power-saving and LED lighting.

- Continuous ON (CONT ON): Display backlight stays on permanently.
- Continuous OFF (CONT OFF): Display backlight is permanently closed.
- **Display Backlight On Time (durA):** Menu is where screen backlight time period is set with unit of second

### 3.5.10. Clear Menu (CLEAR)

Use this menu to delete the stored values in the memory and restore the factory settings. Please see Table 3-3 for the menu tree and [Section 5 for the factory default settings](#).

The following options are available in the clear menu:

- OF : Disables the clear process.
- ALL : Clears all values stored in the memory and restores them to the default factory settings.
- ENERGY : Resets all energy counters.
- COUNTERS : Resets all counters.
- MAX VALS : Clears the maximum values stored in the memory.
- MIN VALS : Clears the minimum values stored in the memory.
- DEMAND : Clears the demand values stored in the memory.
- SETTINGS : Restores all settings to the factory settings.
- ALARMS : Restores the alarm settings to the factory settings.

In order to prevent an accidental deletion, "nO" / "YES" prompt is displayed if you choose any option other than "OFF". See 3.6.3 Approval Prosedure

- To confirm the action:**

Press the right key to blink the "NO" sign. Use the up/down keys to change the "NO" to "YES". Then, press the left key to confirm the action.

- To discard the action:**

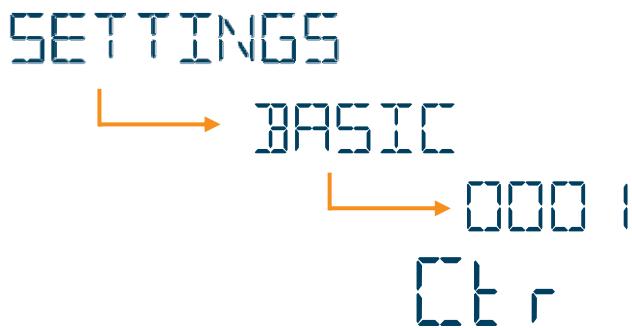

Press the right key to blink the "NO" sign. Then, press the left key to confirm the "NO" option and exit the menu without making any deletions.

The device restarts if you choose SETTINGS, ALARM or All and confirm the action. It will not restart if you choose other options. It will clear the values and returns back to the CLEAR menu.

## 3.6., Save, Changing Value and Approval Prosedure

### 3.6.1. Changing Value/Setting

Menu titles in the menu "SETTINGS" are displayed in the menu bar. When the submenus are entered into, the menu in which the change will occur is shown in the indicator in the first row and the value belonging the related setting is shown in the menu bar and the change may be made here.

There are 2 different menus for changing the values:

- Multiple choice menus:** These menus contain predefined options. Press the right key to choose and blink the first variable of the menu. Press the up/down keys to choose and blink the desired option. Then press the left button to complete your choice.

- Menus with numerical input values:** In these menus, move through the digits to set the desired value. Press the right key to choose and blink the first digit of the variable from the left. Use the right key to move through the digits. Use the up/down keys to increase/decrease the value of the active digit. Set the desired values for variables by setting the individual digit values and press the left key to complete your action.

If any change is made on settings, a registration procedure which is questioning whether or not to record the change will be active after return to "settings" menu. If the changes are saved, device restarts. See 3.6.2. Save Prosedure

### 3.6.2. Save Prosedure

Press the left key until you see the "SAUE" display to confirm or discard the changes you made.

To confirm the changes:

YES  
SAUE

Press the right key to blink the "NO" sign. Use the up/down keys to change the "NO" to "YES". Then, press the left key to store the changes.

To discard the changes:

NO  
SAUE

Press the right key to blink the "NO" sign. Then exit the menu using the left key without saving your changes.

### 3.6.3. Approval Procedure

Following query screen comes up to confirm the action or to reject.

To confirm the changes:

YES  
SuRE

Press the right key to blink the "NO" sign.  
Use the up/down keys to change the  
"NO" to "YES". Then, press the left key to  
store the changes.

To discard the changes:

NO  
SuRE

Press the right key to blink the "NO" sign.  
Then exit the menu using the left key  
without saving your changes.

In the Delete Menu SETTINGS ALL or ALARMS option shuts down the device after the approval of the selected transactions will be reopened. Other options for the restart process is not performed. The device returns to the CLEAR menu and perform the deletion

## **EMG 25 and EMG 20B**

ENERGY ANALYZER

### **4. RS485 COMMUNICATION**

## SECTION 4. RS485 COMMUNICATION

### 4.1. Readable and Writable Data

All features can be change depend on the model.

The following functions are supported:

- **Function 03H:** This function reads the readable addresses in the modbus table.
- **Function 10H:** This function writes to the writable addresses in the modbus table.

Tanımlamalar:

- R / W : Can read and write the value in this address.
- RO : Can only read the value in this address.
- WO : Can only write to this address.
- float : 32 bit floating number.

Related modbus table is given below:

**Table 4.1.** Readable and Writable Data

| Adress                             | Parameter               | Type  | Read / Write | Write Condition |
|------------------------------------|-------------------------|-------|--------------|-----------------|
| <b>Phase -1 Basic Measurements</b> |                         |       |              |                 |
| 0                                  | Phase 1 Voltage (L-N)   | float | RO           |                 |
| 2                                  | Phase 1-2 Voltage (L-L) | float | RO           |                 |
| 4                                  | Phase 1 Current         | float | RO           |                 |
| 6                                  | Phase 1 Cosφ            | float | RO           |                 |
| 8                                  | Phase 1 Power Factor    | float | RO           |                 |
| 10                                 | Phase 1 Active Power    | float | RO           |                 |
| 12                                 | Phase 1 Reactive Power  | float | RO           |                 |
| 14                                 | Phase 1 Apparent Power  | float | RO           |                 |
| 16                                 | Phase 1 THDV            | float | RO           |                 |
| 18                                 | Phase 1 THDI            | float | RO           |                 |
| <b>Phase -2 Basic Measurements</b> |                         |       |              |                 |
| 20                                 | Phase 2 Voltage (L-N)   | float | RO           |                 |
| 22                                 | Phase 2-3 Voltage (L-L) | float | RO           |                 |
| 24                                 | Phase 2 Current         | float | RO           |                 |
| 26                                 | Phase 2 Cosφ            | float | RO           |                 |
| 28                                 | Phase 2 Power Factor    | float | RO           |                 |
| 30                                 | Phase 2 Active Power    | float | RO           |                 |

| 0     | : V(L-N) High - High phase-neutral voltage alarm                   |

If the device was not restarted after entering the password or the "password activation time" has not elapsed, this will read "0" to indicate that password protection is disabled in the "Settings protection" address(modbus adr: 604). In this case, you don't need to re-enter the password.

Password activation time resets and restarts each time a modbus write action is performed or a key is pressed.

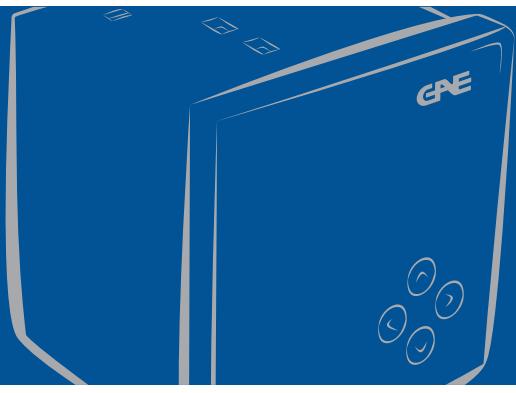

## 4.2. Multiple Choice Settings via Modbus

Modbus addresses for the multiple choice settings, input values and their descriptions are given below.

**Table 4.3.** Description List

| adress | register name            | Write value | Description name |
|--------|--------------------------|-------------|------------------|
| 538    | Connection Type          | 0           | 3P4W             |
|        |                          | 1           | 3P3W             |
| 540    | Relay 1 Function         | 0           | OFF              |
|        |                          | 1           | LOW              |
|        |                          | 2           | HIGH             |
| 542    | Relay 2 Function         | 0           | OFF              |
|        |                          | 1           | LOW              |
|        |                          | 2           | HIGH             |
| 546    | Password Enable          | 0           | OFF              |
|        |                          | 1           | ON               |
| 552    | Baud Rate                | 0           | 1200 baud        |
|        |                          | 1           | 2400 baud        |
|        |                          | 2           | 4800 baud        |
|        |                          | 3           | 9600 baud        |
|        |                          | 4           | 19200 baud       |
|        |                          | 5           | 38400 baud       |
