

# EQUIPMENT MODULE ON SKID

**Guna Era Manufaktur** can reduce your project cost and time drastically. We can reduce your site activities and reduce your risk by supplying single or multiple units from manufacturing facility.

A modular process skid is a combination of equipment that is connected to a frame. It can be a small frame consist of a pump or a complicated high rise system that has multiple mechanical components; such as pressure vessels, pump, heat exchangers, storage tanks, pumps, compressors, steel structures and interconnecting pipelines as well as electrical apparatus such as small control panel cabin and control panel

## Benefits of equipment module on skid

Manufacturing and building a system on the site is very costly, slow and not safe compare to the well-managed fabrication shop. Investors and contractors are looking for ways to reduce the cost, risks and construction time, thus building industrial facilities with modular skids has become more and more popular.

## Design capabilities for modular skid packages

Guna Era manufaktur can design and manufacture custom modular skid process packages as per AWS D1. 1 structural welding standard, Load test of lifting lug as per ASME BTH 30.1, DISNAKER, User registered Third party agency

## Our fabrication capabilities for modular skid packages.

Guna Era Manufaktur can fabricate a single module up to 60 ton weight, 20 meter length. In addition to mechanical fabrication, Guna Era Manufaktur can install electrical cabling, lighting, earthing, instrumentation, rotary equipment, and control panels.

## Industries that we manufacture equipment module on skids

OIL, GAS & PETROCHEMICAL - CHEMICAL - POWER PLANTS - MARINE - WATER - WASTEWATER - FERTILIZER - GEOTHERMAL - BIOGAS - MINING - PULP & PAPER
