

Kelman DGA 900

Next generation on-line multi-gas DGA

Dissolved Gas Analysis (DGA) and moisture measurement of insulating fluids are recognized as the most important tests for condition assessment of transformers. In previous years, multi-gas DGA was traditionally confined to a laboratory environment, with infrequent off-line manual sampling forming part of time-based maintenance strategies. However, as the global average age of transformers continued to rise, the possibility of rapid ageing, unplanned outages and even catastrophic failure between off-line tests also increased, leading many asset owners to adopt on-line DGA monitoring strategies to increase network reliability.

In the early 2000's, GE's Kelman™ range of analysers brought consumable-free on-line multi-gas DGA to the market and GE is now proud to introduce the Kelman DGA 900, our next generation multi-gas on-line DGA and moisture analyser. At its heart lies an evolved implementation of GE's proven Photo-Acoustic Spectroscopy (PAS) measurement technology, providing laboratory challenging levels of precision and repeatability with no consumables and no need for frequent re-calibration. Benefiting from over 40 years of global DGA vendor experience, the Kelman DGA 900 encapsulates learnings and improvements derived from its predecessors to bring improved performance, innovative new features, enhanced user experience and increased robustness.

Key Benefits

- Provides remote alert and multi-gas diagnostic of deteriorating transformer condition
- Expedites operational decisions without needing to go to site for manual oil sampling
- Issues can be detected in their infancy, avoiding unexpected failures and facilitating planned outages
- Anchors condition based maintenance and asset replacement strategies on hard data
- No need for consumables or frequent recalibration to operate at optimum performance
- New "Rapid Mode" provides near real-time insight on fast developing faults
- Enhanced computing power and scalable I/Os for a flexible transformer monitoring solution
- Compatible with mineral insulating oils and newer ester based fluids (natural and synthetic)

Applications

The Kelman DGA 900 is an invaluable foundational tool for implementing Asset Performance Management (APM) across electrical generation, transmission and industry, enabling a condition based asset replacement strategy and delivering improvements in system reliability and availability.

A DS-Agile™ and Grid APM ready device, the DGA 900's wide range of communication methods and protocols enables connection to those platforms and integration with GE's Perception™ transformer fleet management software as well as other software, historian and SCADA systems.

Proven Technology

- 4th generation of GE's PAS technology delivering improved accuracy with lower detection limits
- From the only vendor with 15 years PAS experience and installed base of >13,000 units
- No carrier or calibration gas consumables
- Laboratory challenging field measurement of nine gases plus moisture
- Complete DGA analysis up to once per hour and new "Rapid Mode" for critical gases in ~30 min

Reliable and Available

- First Kelman device designed by GE leveraging our quality and continuous improvement ethos
- Enhanced reliability and easier field servicing
- 5-year warranty as standard †
- Factory calibration benchmarked against industry standard laboratory assessment

Intuitive and Flexible

- Integrated 7" colour LCD screen for simplified local user interaction and visualisation of data
- Lightweight innovative two-enclosure design enables adjacent or separated installation
- Can connect to AC or sub-station DC power

Scalable and Connected

- Expandable analogue/digital I/Os
- Future proof computing platform ready for feature enhancements
- Designed for cyber security, with a range of comms options and protocols

Technical Specifications

MEASUREMENTS	
Technology	Frequency
Automated head-space gas extraction.	Configurable from once per hour to once every 4 weeks.
Photo-acoustic spectroscopy (PAS) gas measurement.	Faster sampling automatically triggered upon alert level reached.
Thin film capacitive moisture sensor.	"Rapid Mode" provides a rapid indication of the evolution of the gasses indicated below in ~30 minutes.
Immersed fiber optic oxygen sensor.	

Range	LDL	UDL	Accuracy*	Repeatability	Available in Rapid Mode
Hydrogen (H ₂)	5	5,000 ppm	± LDL or ±5%	< 3%	•
Carb. Monox. (CO)	1	50,000 ppm	± LDL or ±3%	< 2%	•
Methane (CH ₄)	2	50,000 ppm	± LDL or ±3%	< 2%	•
Acetylene (C ₂ H ₂)	0.5	50,000 ppm	± LDL or ±3%	< 2%	•
Ethylene (C ₂ H ₄)	1	50,000 ppm	± LDL or ±3%	< 2%	•
Carb. Diox. (CO ₂)	20	50,000 ppm	± LDL or ±3%	< 3%	•
Ethane (C ₂ H ₆)	1	50,000 ppm	± LDL or ±3%	< 2%	•
Oxygen (O ₂)	100	50,000 ppm	± LDL or ±5%	< 2%	•
Nitrogen (N ₂) **	10,000	100,000 ppm	± LDL or ±15%	< 3%	•
Moisture (H ₂ O)	0	100% RS (in ppm)	± 3% ppm	< 3%	•

*whichever is greater. Accuracy quoted is the accuracy of the detectors during calibration. Gas-in-oil measurement may be affected by oil type and condition. Repeatability as measured from final production test data.

** N₂ value is calculated and available on free-breathing transformers only.

Time Response (typical): 1 measurement cycle ; >95%: C₂H₂, CO, C₂H₆, C₂H₄, CH₄, CO₂ ; >90%: H₂

FEATURES

- Display**
 - 4 x sunlight visible LED arrays
 - Integrated backlit 7" inch color resistive touch screen (800 x 480)
 - Embedded secure webserver (https)
- Analogue Inputs**
 - 1 x CT input standard
 - 5 x optional analogue inputs slots (Add up to 5 additional load CT's or PT100 inputs or 4-20mA sensor cards)
- Digital Output**
 - 6 x standard customer programmable dry contact relays (type C, SPDT), NO/NC, 10A@ 250Vac resistive load, 10A@ 30Vdc resistive load
 - 1 x standard service alarm relay
 - 1 x standard watchdog relay

Digital Communications / Protocols

- 1 x Modbus® over RS485 / TCP/IP as standard
- 1 x Standard 1Gb Ethernet (RJ45)
- Option: DNP3.0 over RS485 or TCP/IP
- Option: IEC 61850 Edition 2
- Option: ST/SC Multi-mode fiber converters
- Option: GSM/GPRS/UMTS/HSPA+ modem
- Option: Wi-Fi (802.11b/g/n)

Alarms

- Multiple Alarm setting/scenarios, all assignable to relays or SMS
- Gas: absolute gas level, Rate of Change (ROC), moisture level, Total Dissolved Combustible Gas (TDCG) and 7 x user defined gas ratios alarms
- Analog inputs: absolute Level, and Rate of Change (ROC)
- Digital inputs: status transition

DGA 900 gas levels displayed on the local LCD screen

ENVIRONMENT

- Conditions**
 - Operating ambient temperature: -40°C to +55°C (-40°F to +131°F)
 - Operating ambient humidity: 0-95% RH, non-condensing
 - Oil temperature at valve***: -20°C to +120°C (-4°F to +248°F)
- ***Based on testing carried out using VOLTESSO™ 35 mineral oil, over a ¾" pipe run of 10 metres or less from oil supply or return valve to monitor connection point and on transformer oil supply valve volumes of 200ml or less. For oil temperatures colder than -20°C GE recommends the use of heat trace cabling on piping

Enclosure

- IP56 certified
- Standard: Powder coated marine grade aluminium (RAL9002)
- Option: Unpainted 316 Stainless Steel

Power Requirements

- AC**: Nominal 100-240 Vac, Range 85-264 Vac, 4A
- DC**: Nominal 100-250 Vdc, Range 90-300 Vdc

Mechanical

	Analysis Unit	Hub Unit
Dimensions	600 x 484 x 330 mm 23.6 x 19.1 x 13.0 in	600 x 380 x 330 mm 23.6 x 15.0 x 13.0 in
Weight	33.4Kg 73.6 lb	18.5Kg 40.8 lb

OPTIONS

- Mounting stand
- Sun canopy
- Longer umbilical cable between units
- Analogue output of gas values
